

Dexter Dev

A unified control
center for solo
developers

Presented by
Daksh Dixit

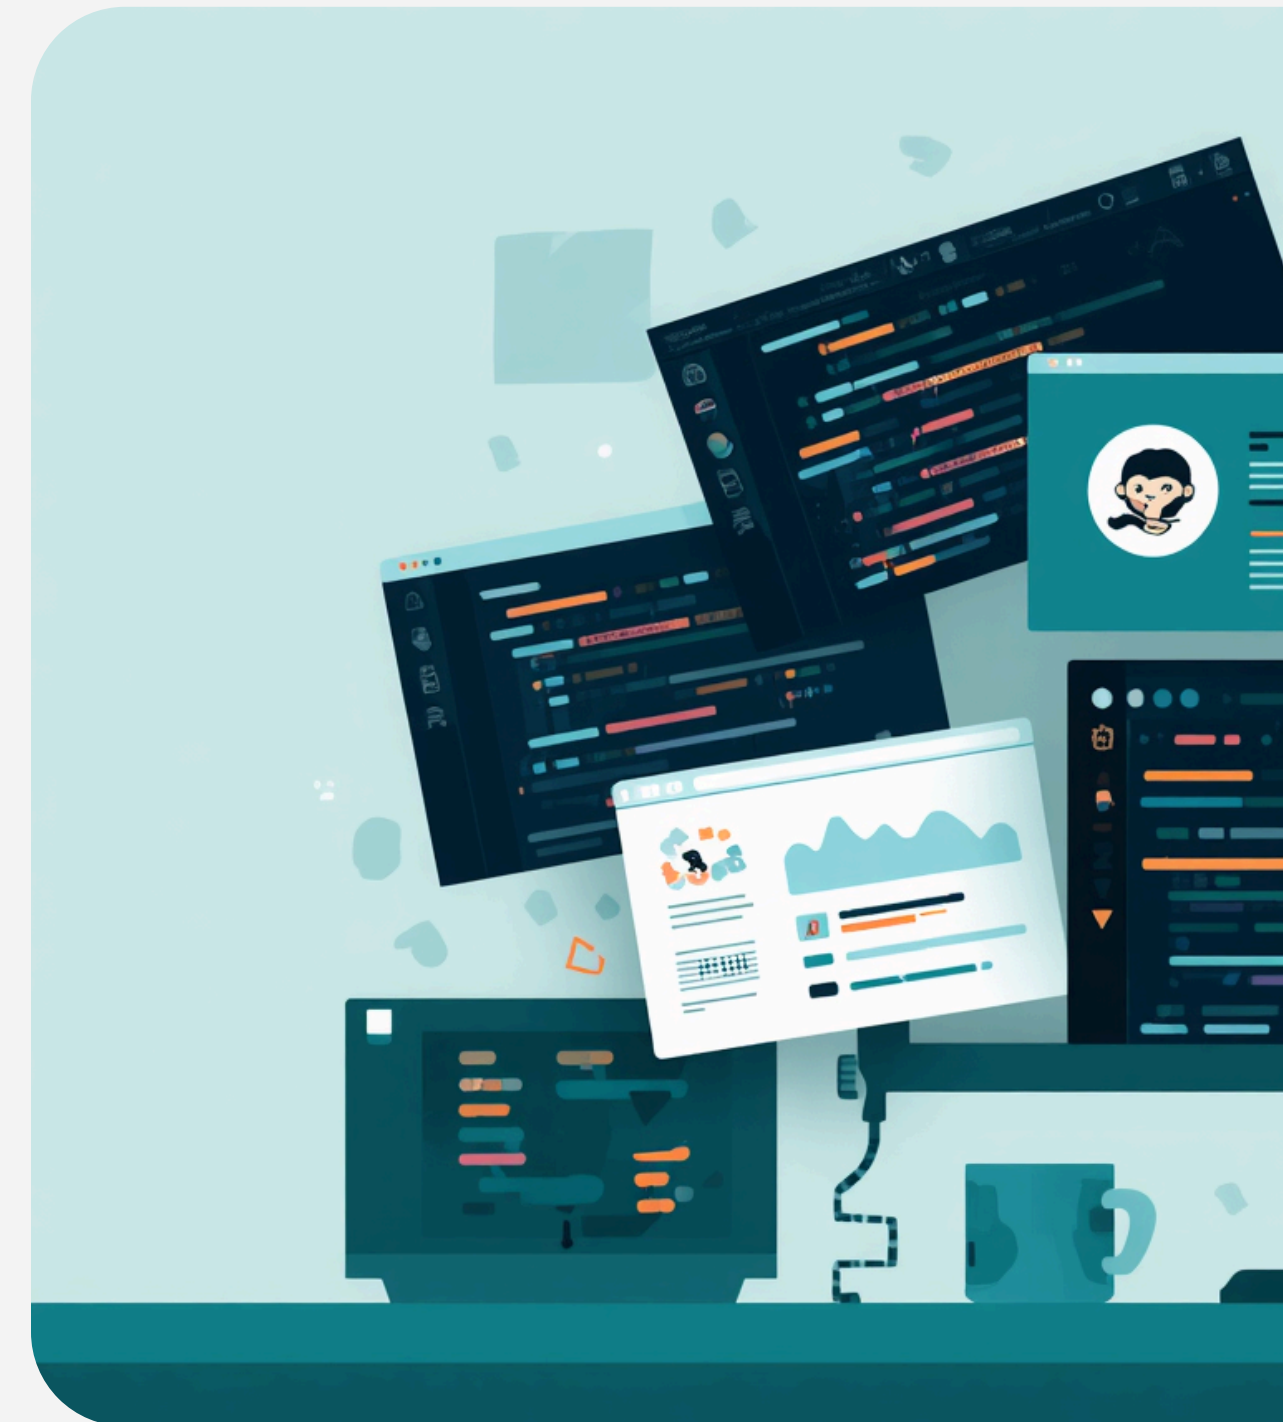

The Developer Productivity Problem

Context-Switching Kills Focus

Developers juggle GitHub, Vercel, Netlify, todo apps like Notion, and calendars — all as separate, disconnected tools with no single source of truth.

- Every context-switch costs ~23 minutes of deep focus. Multiply that across a full dev day and productivity collapses.
- No unified dashboard exists for solo developers. The market serves teams — not the individual coder working alone.

Introducing Dexter Dev

One lightweight, browser-local dashboard for code, deployments, tasks, and reminders.

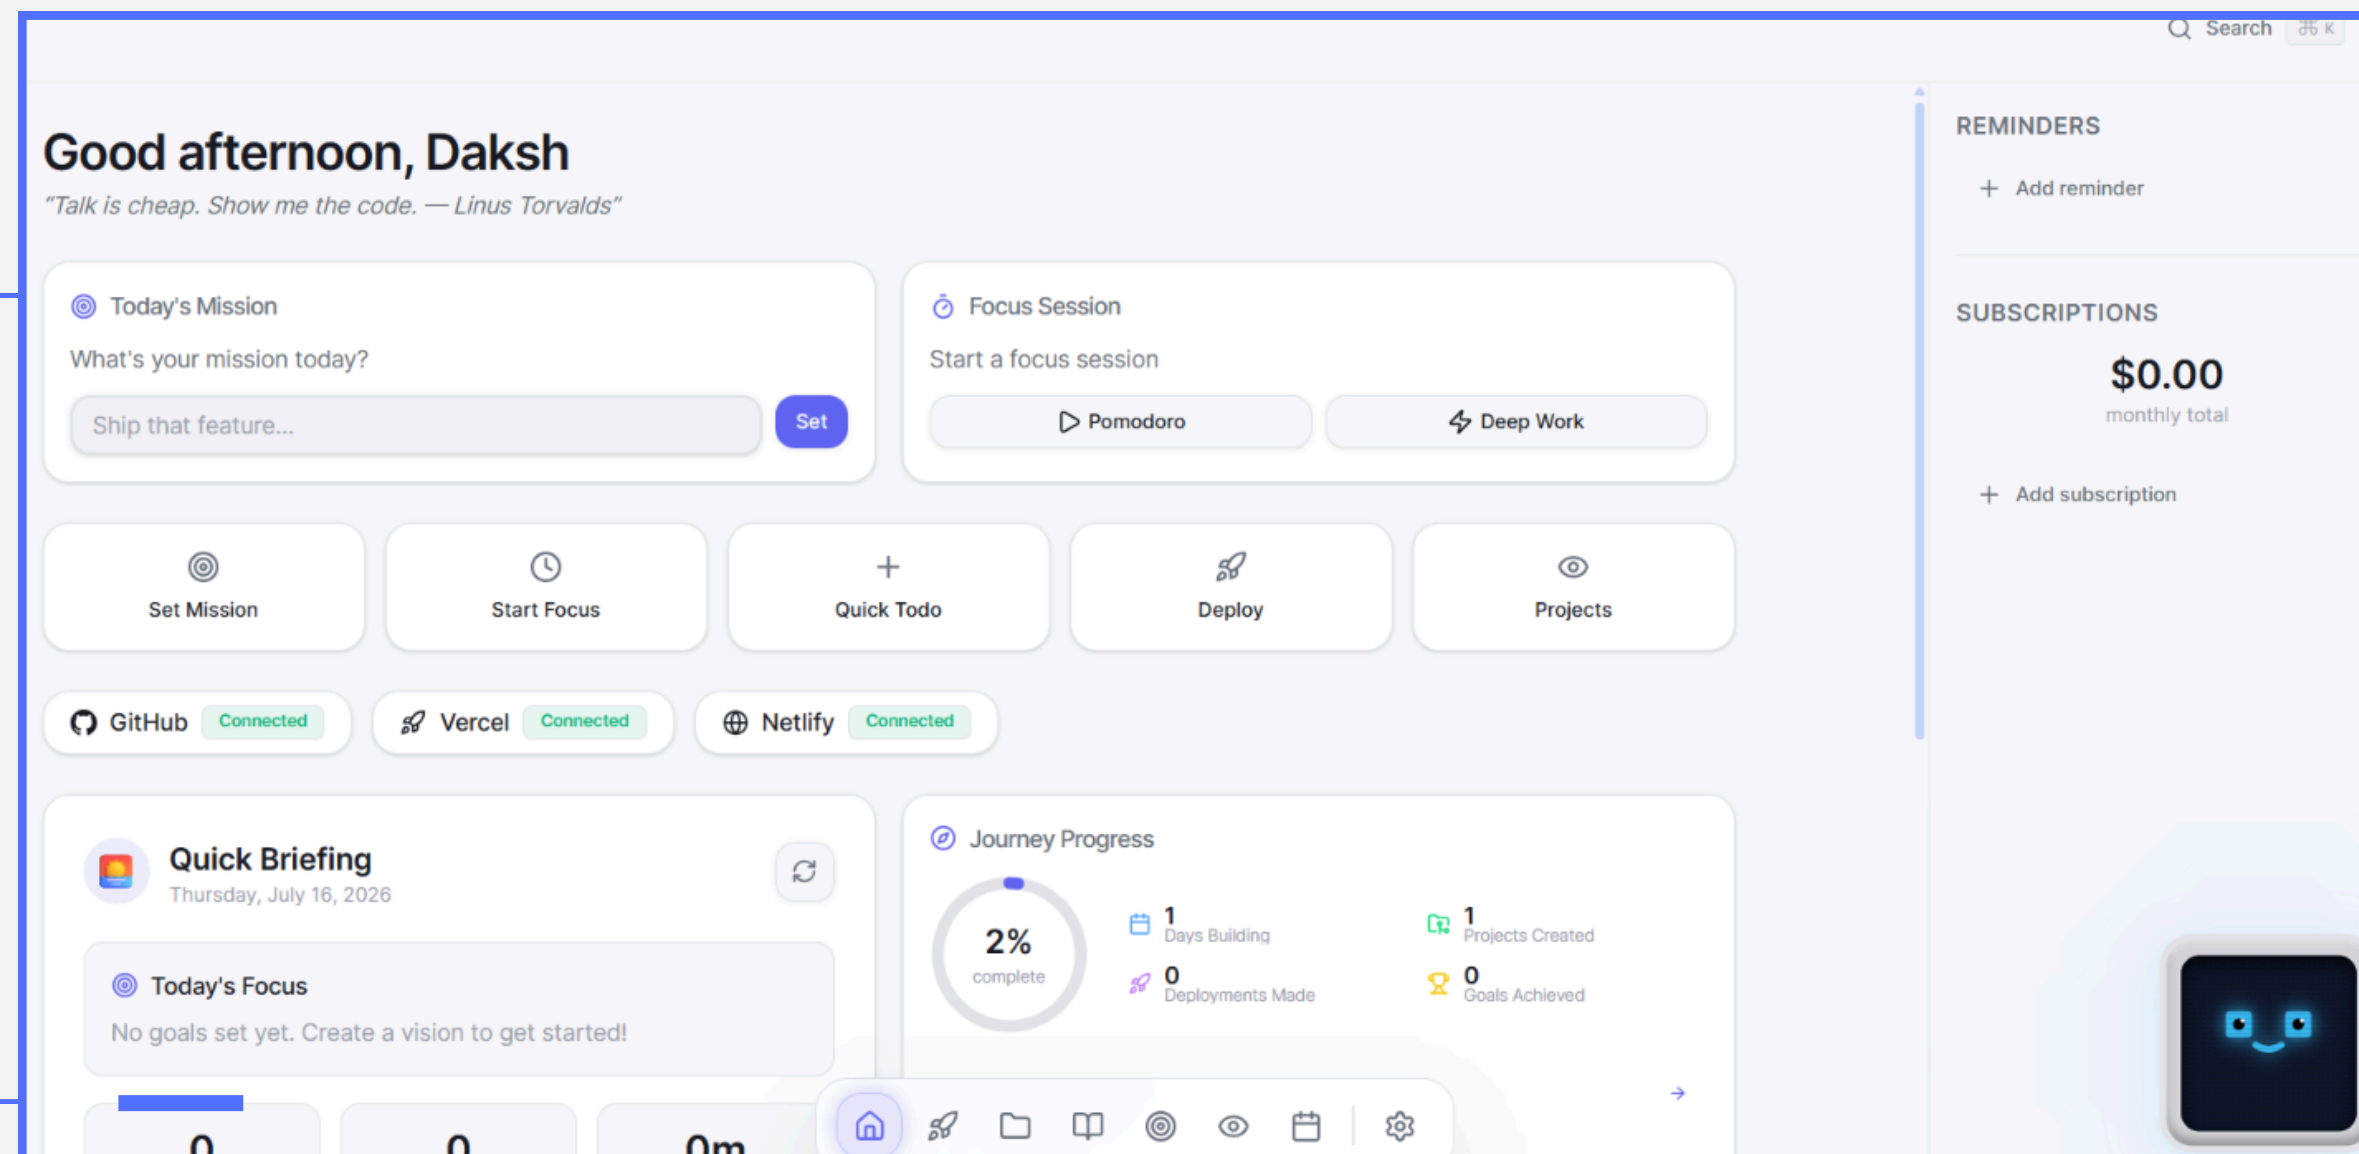

Your Unified Dev Dashboard

No database or server needed — lives right beside your code.

100% local. Zero SaaS bloat. Everything a solo developer needs in one place.

CI/CD Unified v1

Dexter connects all your deployment providers in one place — manage repos, trigger builds, and track live deployment statuses without switching tabs.

- GitHub + Vercel + Netlify Unified
- Create Repos & Link Deploy Targets
- Trigger Builds from Dashboard
- Monitor Live Deployment Status Badges

Deploy Without Switching Apps

Triggering Deploys & Workflow Control

- Redeploy directly from the Dexter dashboard without switching apps or opening external tools.
- Trigger GitHub Actions workflows and monitor run status inline — all from a single control panel.
- 4 built-in GitHub Actions workflows automating deploy notifications and health checks out of the box.

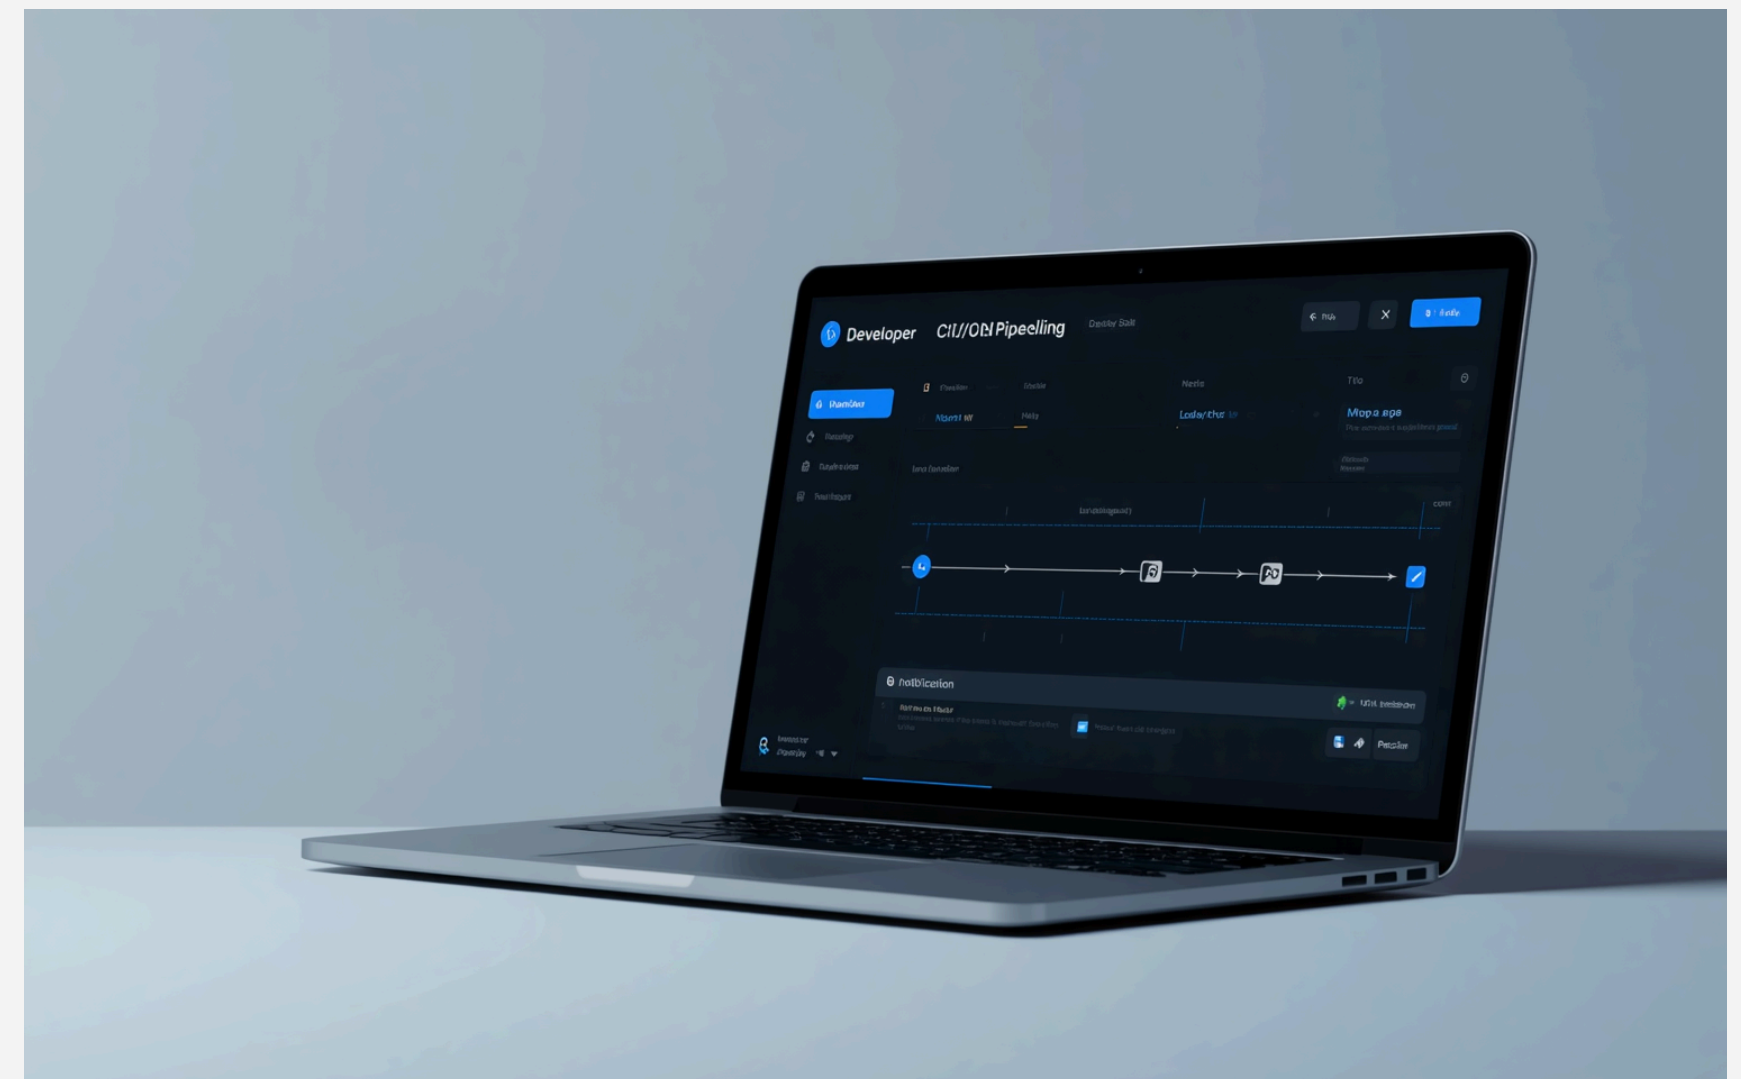

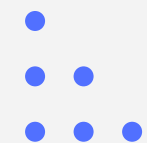

End-to-End Pipeline Visibility

Full CI/CD Flow
At a Glance

From git push to live deployment — every stage tracked in one unified dashboard view.

- git push → build → deploy → notification, all monitored inline without switching tools.
- Open production and preview URLs directly from the dashboard with a single click.

Privacy-First Architecture

- 100% Browser-Local Storage
- API Tokens Stored Locally
- No Tracking or Telemetry

Dexter Dev is fully self-contained — all data lives in your browser's localStorage. No servers, no databases, no cookies. Your API tokens never leave your machine.

Privacy-First Design

The Science Behind the Dexter Mascot

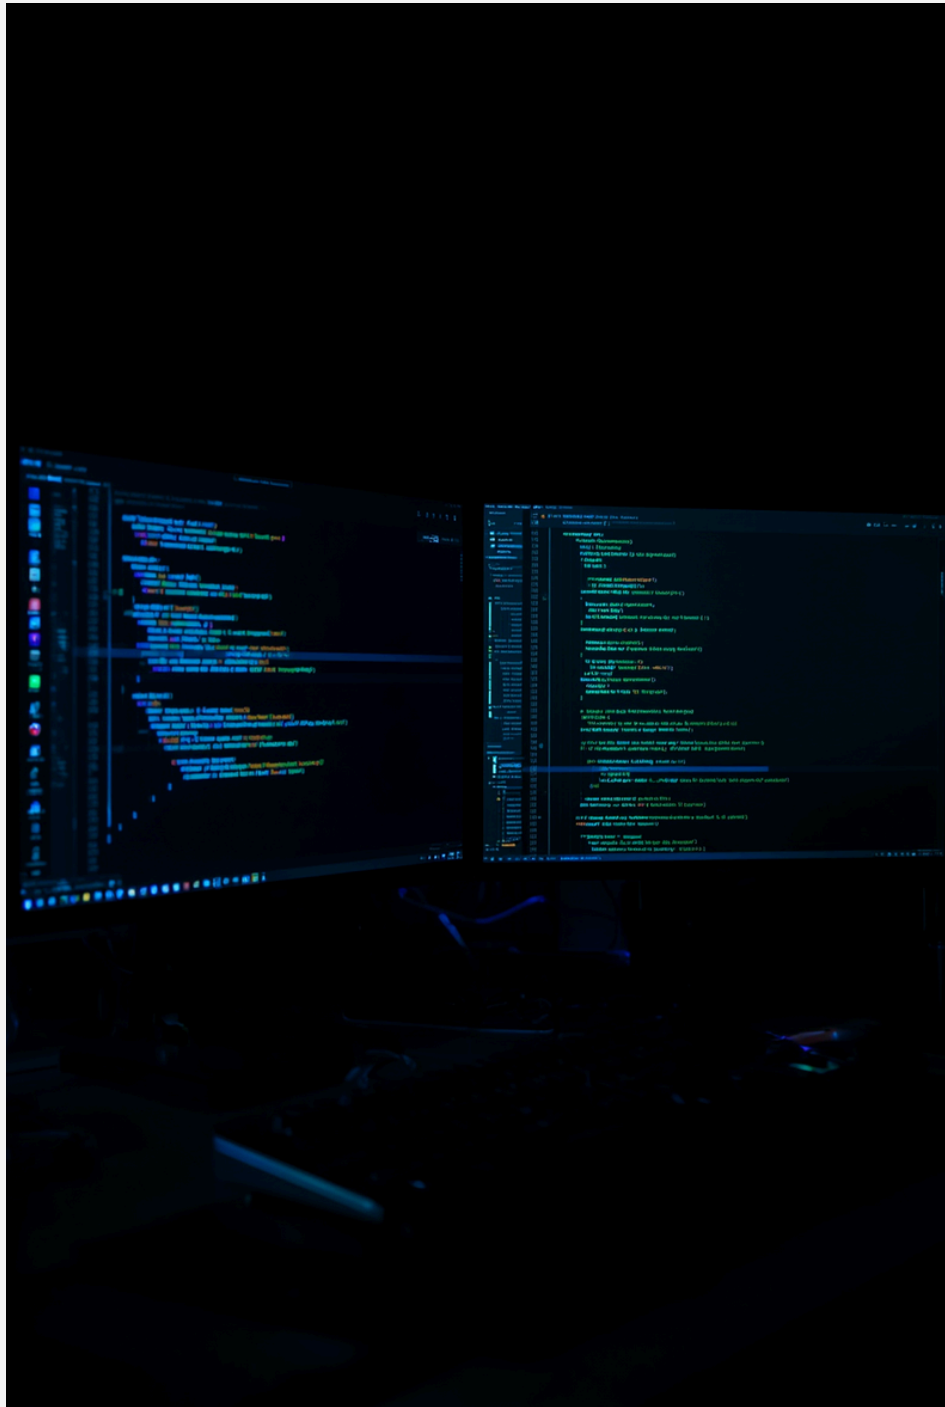

Companion Psychology

- Social Presence (Ex: Duolingo)
- Emotional Mirroring (Ex: Taskade)
- Positive Reinforcement (Ex: Notion AI)

- Reduces developer isolation through a persistent, responsive companion that reacts to your workspace activity.
- Mascot expressions mirror build success, failures, and streaks — creating an emotionally engaging feedback loop.
- Streak-based affection rewards consistency, reinforcing productive coding habits through micro-interactions.

Tech Stack Overview

- **Next.js** for fast app flow
- **GitHub Actions** for smooth automation CI/ CD
- **Browser API** for client features
- **Auth.js** for sign-in setup
- **Tailwind CSS** and **Framer Motion** for clean looks and motion
- **Zustand** for simple state flow
- **Telegram API**

Let's Build Together

Let Dexter be your coding companion

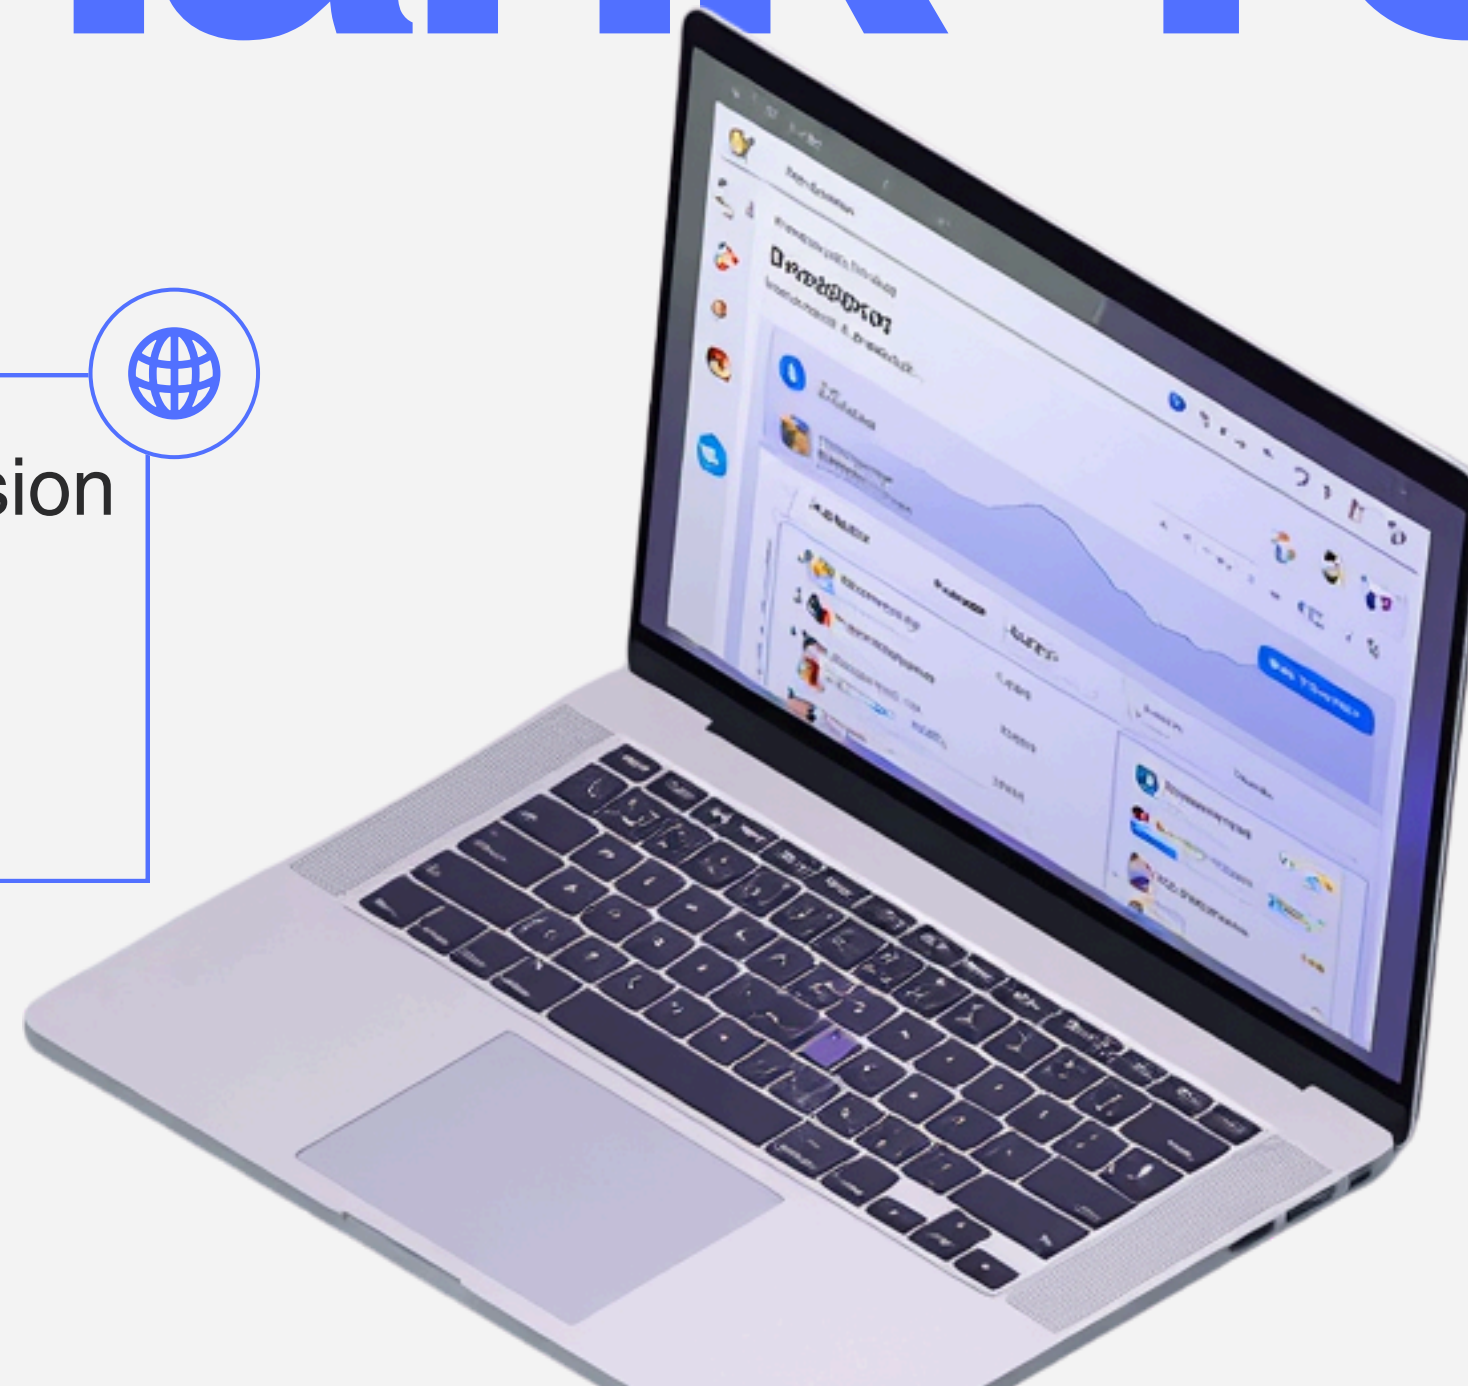

Try Dexter Dev, contribute on GitHub, or reach out to collaborate. Your unified dev dashboard awaits.

Thank You!
